

Vehicle Call Forward & Slow Down Signs

Safe and Efficient Marshalling of Vehicles, Increased Productivity

Scrimsign have been developing a range of electronic display products for vehicle call forward applications in partnership with our customers for many years now.

The displays and software are customised to be an exact fit for your site environment to achieve optimum results.

The call forward signs improve efficiency and safety by ensuring that as much as possible operators remain at their stations and drivers stay in their cabs.

Our range of slow down signs also improve safety and decrease dust pollution by reminding drivers of their obligations once on site.

Scrimsign has been designing manufacturing and installing custom electronic display solutions since 1986.

key benefits & features

- Increase Efficiency & Productivity
- Improve Health & Safety
- Enhance Customer Satisfaction
- Reduce noise pollution with less frequent use of tannoy's
- Robust IP65 enclosure and proven electronics for reliable 24/7 operation
- Various communication options available RS232, RS485, Ethernet
- Automatic dimming of display for ambient conditions
- Easy to use software
