

Windfarm Display

Display Environmental & Performance Information for your Visitors

Scrimsign developed this unique information display for the Isle of Gigha Heritage Trust in 2011. Printed graphics and text provide information regarding the history and achievements of the windfarm on the Isle of Gigha with current performance statistics and live wind speed and direction in green LED text.

The product can be easily adapted for other windfarm sites with optional number of LED text lines and of course alternative printed content.

The display is an exciting and fresh way to promote the achievements of your site to visitors and enhances their experience.

Scrimsign has been designing manufacturing and installing custom electronic display solutions since 1986.
